NATIONAL MUSEUM OF THE PHILIPPINES
Office of the Director-General
PAMANA: Support Ticketing System
USER GUIDE
Super Admin

Document	User Guide — Support Ticketing System · NMP-STG-UG-003
System	National Museum of the Philippines Support Ticketing System (STS)
Modules covered	Introduction, sign-in, dashboard, portal access, users, roles, permissions, forms, audit, errors, notifications, and account settings
Version	1.0
Date issued	October 2026
Prepared by	
Audience	Super Admin
Classification	Internal – For Agency Use

***Note.** PAMANA is used only as the source of employee sign-in and requestor profile autofill (name, email, division or section, and designation). The product name of this application is Support Ticketing System. Menus use Submit Request. Published forms may cover any request type that Admin designs in the Form Builder.*

Contents of This Guide

- 1. Introduction
 - 1.1 Overview
- 2. General Information
 - 2.1 Objectives
 - 2.2 System users and their descriptions
 - 2.3 System features
- 3. Getting Started
 - 3.1 Log-in / Sign in
 - 3.2 Dashboard
 - 3.3 System navigation
 - 3.4 Reports and Analytics
 - 3.5 My Requests and Submit Request
 - 3.6 Portals and SWITCH PORTAL
 - 3.7 Users

3.8 Roles

3.9 Permissions

3.10 Form Management

3.11 Activity Logs

3.12 Error Monitoring

3.13 System Notifications

3.14 Profile, Settings, MFA, and logout

A. Overview

The Support Ticketing System (STS) is the museum's platform for staff support and service requests. Super Admin keeps the access model, watches the whole system, and can step into the Admin, Records, and Staff portals without a second account.

This guide is for the Super Admin role. It follows the Super Admin sidebar from top to bottom: Dashboard and reports, your own requests, the three working portals, user and access management, system management, then account settings.

Day-to-day form design stays in the Admin portal. Day-to-day publish or disapprove stays in the Records portal. Staff submission and client review stay in the Staff/Client portal. Super Admin opens those portals to do that work. Super Admin does not replace those procedures.

Note. Screen names in this guide match the live system: sidebar labels, page titles, and buttons. Where a queue is empty, the signed-in person is not the current reviewer for any request.

B. Objectives

The Support Ticketing System gives the National Museum of the Philippines one place to create, review, publish, submit, approve, assign, monitor, and close staff support requests. It is for museum staff across offices, sections, and divisions.

The system keeps requestor details consistent through PAMANA autofill, shows each person only the work that belongs to their role, and keeps an activity record of significant actions.

C. User's Role, Access, and Permission

Access is determined by the role stored on the employee account. After Sign In, the system opens the home page for that role. A person sees only the menus allowed for the portal they are in.

i. Super Admin

Super Admin has the highest level of access. This role opens the Super Admin portal, manages Users, Roles, and Permissions, reviews system-wide dashboards, reports, activity logs, error monitoring, and system notifications, and can open the Admin, Records, and Staff/Client portals with the same account. While inside Admin, Records, or Staff, a SWITCH PORTAL group appears in the sidebar so the user can move without signing out.

ii. Admin

Admin (Section Head — ODG Section and Regional Component Museum; Division Head — all except ODG) creates request forms in Form Builder, manages My Forms, approves or rejects requests, assigns personnel from the form creator's division, and uses Approvals, Request Management, Assigned to me, Reports, and Messages. Admin may also submit a personal request.

iii. Record Admin

Record Admin reviews forms that Admin has submitted, then chooses Approve & publish or Disapprove with remarks. Published forms become available to Staff. The Records menus are Dashboard, Pending Forms, Published Forms, and Activity Logs.

iv. Staff (Client)

Staff is the general museum employee. After Sign In, a Staff account opens Assigned to me, not the Dashboard. Staff submits requests from any published form, tracks those requests under My Requests, marks the service complete, completes the Client Satisfaction Survey, then closes or reopens the request. When the form names them as Recommending Officer, Immediate Supervisor, or Action Officer, the matching For Review queue shows the request. Assigned to me lists requests an Admin assigned to them. Those are not the same as requests they submitted.

D. System Features

- **Form Builder.** Admin creates a general request form in a six-step wizard: General, Fields, Print Template, Client Request Approval, Workflow, and Supporting Doc.
- **Form review and publishing.** Record Admin reviews a pending form and publishes it or disapproves it with remarks. Only a published form can be selected by Staff.
- **Request submission.** Staff, and Admin or Super Admin acting as a requestor, select a published form. Requestor details auto-fill from PAMANA when the username matches an employee record.
- **Client review.** If the form requires it, the request stops at For Review (Recommending) and then For Review (Supervisor) before it reaches Action Officers.
- **Action Officer workflow.** Configured officers approve in sequence. The last officer forwards the request for task assignment.
- **Personnel assignment.** After the Action Officer steps are finished, the request manager assigns the request once, to active personnel in that admin's section. Assignment sets the status to In Progress.
- **Service completion and feedback.** The requestor marks the service complete, opens the Client Satisfaction Survey, confirms with I've submitted feedback, then chooses Close ticket or Reopen request.
- **Messaging.** Admin and Staff portals include Messages, including poke and ticket-linked Request messages.
- **Notifications.** The bell in the header lists updates for the signed-in portal. Super Admin also has a System Notifications page for queues across portals.
- **Role-based access.** Users, Roles, and Permissions are maintained in the Super Admin portal.
- **Audit and errors.** Activity Logs record significant actions. Error Monitoring records server, browser, and console failures.

– **Account.** Settings updates display name, division or office, and designation. The sign-in password is the PAMANA password and is not changed inside STS. MFA can be turned on from Set up MFA.

E. Getting Started

I. Log-in / Sign in

The Log-in page is the single entry point for every role. The system reads the account role and opens the correct portal.

1. Open the system. Use a supported web browser and go to the official address, for example <http://202.90.136.222:5173/login>.

2. Enter your credentials.

a. Username. Type the museum username assigned to you.

b. Password. Type your PAMANA password.

3. Use the helpers only if you need them.

a. Show password. Select the eye icon to check the password before you submit it.

b. Remember me. Tick this only on a computer you alone use. It stores the username on that browser.

c. Forgot password? This does not send a reset email. The page tells you to contact your system administrator. Change the password in PAMANA, then sign in here with the new password.

4. Sign In. Select Sign In. If multi-factor authentication is enabled on the account, an Authentication code field appears. Enter the 6-digit code from the authenticator app, or a one-time recovery code, then select Sign In again.

5. Land on the correct home page. A Super Admin account opens the Super Admin Dashboard. Staff opens Assigned to me. Admin opens the Admin Dashboard. Record Admin opens the Records Dashboard.

***Note.** If the page says the API server is not running, the application service is down. Do not keep retrying the password. Report it to ICT.*

II. Dashboard

The Dashboard is titled Dashboard. The description is the overall status of users, forms, requests, and recent activity.

1. Read the user counts. Total Users, Total Admins (admins plus super admins), Records Personnel, and Staff.

2. Read the form and request counts. Pending Forms and Published Forms count form templates. Pending Requests counts tickets whose status is Pending Approval only. Requests still in For Client Approval or For Process Owner are not included in that card. In Progress counts assigned work.

3. Read the completion counts. Completed (Resolved), Closed Tickets, Reopened, and Completed + Closed.

4. Portal access. Three cards open the working portals: Admin Portal (forms, approvals, assignments, and requests), Records Portal (review pending forms and publish templates), and Staff / Client Portal (the system as an ordinary employee).

5. Recent activities. Shows the latest system events. View all logs opens Activity Logs / Audit Logs.

III. System navigation

The sidebar groups are fixed. Settings, Set up MFA, and Logout sit at the bottom on every portal.

MAIN

- Dashboard.
- Reports & Analytics.

REQUESTS

- My Requests — requests this Super Admin account submitted.
- Submit Request — submit a personal request on a published form.

PORTALS / ACCESS

- Admin Portal.
- Records Portal.
- Staff/Client Portal.

USER & ACCESS MANAGEMENT

- Users.
- Roles.
- Permissions.

SYSTEM MANAGEMENT

- Form Management — opens My Forms Analytics for forms tied to this account, plus a link to create a form in the Admin portal.
- Activity Logs / Audit Logs.
- Error Monitoring.
- System Notifications.

ACCOUNT

- My Profile — the same Settings screen as the Settings button: display name, division or office, designation, and the PAMANA password notice.

The header bell on the Super Admin home says there are no system alerts when nothing is pending. Queues that need a person to act are listed on System Notifications.

IV. Reports and Analytics

1. Open MAIN > Reports & Analytics.

2. Read the four cards. Total requests, Pending approval, Closed, and With feedback.

3. Read Client feedback comments. This list shows requests whose requestor has confirmed feedback, with the comment they left for admin.

These figures describe request volume and feedback. They do not publish a form or change a ticket. Use the portal that owns the work when a number needs action.

V. My Requests and Submit Request

Super Admin can be a requestor. REQUESTS > Submit Request uses the same form as Staff: choose a published form, wait for PAMANA autofill, complete the fields, preview, and select Submit request. The ticket is listed under My Requests for this account only.

1. Open the ticket from My Requests.

2. Mark service complete, confirm feedback, then Close ticket or Reopen request, using the same rules as Staff. You can do this only on a request you submitted.

3. Request messages opens the Admin messages view for that ticket while it is not closed.

VI. Portals and SWITCH PORTAL

Use PORTALS / ACCESS on the Super Admin sidebar, or the three cards on the Dashboard.

1. Admin Portal opens the Admin Dashboard. Use it for Form Builder, My Forms, Approvals, Request Management, assignment, Admin messages, and Admin reports.

2. Records Portal opens the Records Dashboard. Use it for Pending Forms (Approve & publish or Disapprove with remarks), Published Forms, and Records activity.

3. Staff/Client Portal opens the Client Dashboard so you can see the staff experience. Staff themselves land on Assigned to me; this card opens Dashboard.

4. Return or switch. After you leave Super Admin, the sidebar shows SWITCH PORTAL with Super Admin, Admin, Records, and Staff. Select Super Admin to return to the Super Admin Dashboard. You stay signed in.

***Note.** SWITCH PORTAL is visible only while a Super Admin is inside Admin, Records, or Staff. It is not shown on the Super Admin sidebar itself, because PORTALS / ACCESS already provides the same destinations.*

VII. Users

USER & ACCESS MANAGEMENT > Users assigns roles to active employees. The page does not create a PAMANA employee. The person must already exist as an active employee.

1. Read the three counts. Active employees, With roles, and Needs role assignment.

2. Search. Search name, username, email, or ID. Filter with All roles and the access filter.

3. Assign. On a person with no role, select Assign. Tick the role or roles, then Save roles.

4. Manage. On a person who already has a role, select Manage, change the ticks, then Save roles.

5. Move pages with Prev and Next when the list is longer than one page.

Give Super Admin only to the people who must manage access and see every portal. Give Admin to section or division heads who build forms and process requests. Give the Records role to staff who publish forms. Leave general employees on the Staff role so they use the Client portal.

VIII. Roles

- 1. Open Roles.** The page manages system roles and the permissions on each role. Counts show Roles, Custom roles, and Role assignments.
- 2. New role.** Select New role, enter the name and an optional description, then Create.
- 3. Edit a role.** Open the role, tick the permissions it should have, and Save. Permissions are applied to people by assigning that role on Users.
- 4. Do not delete or empty a role that people still use** until those people have another role. A person with no usable role cannot reach their work.

IX. Permissions

Permissions is a catalog. It lists capabilities grouped by category, including ticketing permissions. Search to narrow the list. You do not assign a permission to a person on this page. Assign permissions to a role on Roles, then assign that role on Users.

X. Form Management

SYSTEM MANAGEMENT > Form Management opens My Forms Analytics: Total Requests, Total Divisions / Sections, Most Requested Service, Requests This Month, and charts of requests by division and service. The form list on this page is the forms associated with this account.

- 1. Use + New Form** when you need to design a form. That action opens Form Builder in the Admin portal.
- 2. Build the form in Admin** through General, Fields, Print Template, Client Request Approval, Workflow, and Supporting Doc. Save a draft or send it to Records.
- 3. Publish from the Records portal.** Open Pending Forms and choose Approve & publish or Disapprove with remarks. Staff can select the form only after it is published.

Note. Form Management is the analytics view. It is not a second Form Builder and it is not the Records publish queue.

XI. Activity Logs / Audit Logs

- 1. Open SYSTEM MANAGEMENT > Activity Logs / Audit Logs.**
- 2. Read the feed.** Each line is a significant action across portals: who did it, what happened, and when. The page title states that this is the system-wide audit trail.
- 3. Use the log to trace a form or ticket** when someone asks who submitted, approved, assigned, published, or closed it. The log does not change the ticket. Go to the portal that owns the record if you must act.

XII. Error Monitoring

Error Monitoring lists server exceptions, browser errors, and console failures. Repeats of the same error stay grouped until the entry is resolved.

1. **Read the cards.** Open errors, Open warnings, Seen in last 24h, and Browser-side.
2. **Filter the table.** Status is Open, Resolved, or All. Level is Errors or Warnings. Source is Server, Browser, or Console. Search message, exception, URL, file, or user, then select Search.
3. **Open a row** for the full details and stack trace.
4. **Mark as resolved** when the failure has been handled. Reopen if it is still a problem. Delete removes one entry.
5. **Resolve all** marks every open entry resolved after you confirm. Delete resolved permanently deletes resolved entries after you confirm. Refresh reloads the list.

XIII. System Notifications

This page summarizes queues that need a person in another portal. Each portal also has its own bell.

1. **Pending form reviews.** The count is forms waiting for a Records recommendation. Open Records · Pending Forms.
2. **Pending client approvals.** The sentence on the page says these requests are awaiting Admin approval. The number is the Pending Approval count, the same figure as Pending Requests on the Dashboard. Open Admin · Approvals to see the live approval queue, including For Process Owner.
3. **Audit trail.** A short list of recent activity. Open Activity Logs for the full feed.

XIV. Profile, Settings, MFA, and logout

1. **Open ACCOUNT > My Profile, or Settings at the bottom of the sidebar.** Both open Settings.
2. **Update Display name, Division / office, and Designation.** Email and Role stay read-only. Role reads Super Admin. Name and division are required. Select Save profile.
3. **Password.** STS does not change the PAMANA password. Change it in PAMANA, then sign in here with the new password. Forgot password? on the log-in page gives the same instruction.
4. **Set up MFA** the same way as any other role: password, scan the QR code or enter the setup key, save the one-time recovery codes, then Confirm and enable with a 6-digit code.
5. **Logout.** Because a Super Admin session is also present on Admin, Records, and Staff, Logout clears all of those sessions together and returns to the log-in page.

Appendix A. Approvals

The undersigned acknowledge that they have reviewed this User Guide and agree with the information presented. Changes to this User Guide will be coordinated with, and approved by, the undersigned or their designated representatives.
